

Professional Summary

AI/ML Engineer and Software Engineer with strong foundations in Python, data structures, machine learning, NLP, and scalable API development. Experienced in building production-ready ML pipelines, deploying intelligent systems, and transforming complex datasets into actionable insights. Passionate about solving large-scale engineering problems and building reliable data-driven products.

Technical Skills

- Languages: Python, SQL
- Backend: REST APIs, FastAPI
- Machine Learning: Scikit-learn, TensorFlow, Keras, XG-Boost
- NLP: Vectorization, Embeddings, Similarity Search
- Computer Vision: CNNs, Image Classification
- MLOps: Pipelines, Model Evaluation
- Data: Pandas, NumPy, Matplotlib, Power BI
- Tools: Git, GitHub, Jupyter

Experience

Machine Learning Engineer Intern — Future Interns
Bengaluru, India

Dec 2025

- Built end-to-end ML pipelines for preprocessing, feature engineering, training, and evaluation.
- Developed REST APIs using FastAPI for real-time model inference.
- Improved model accuracy using hyperparameter tuning and cross-validation.
- Optimized Python workflows using vectorized operations.

Projects

AI Chatbot – NLP-Based Telegram Bot

- Built NLP chatbot using Python and FastAPI integrated with Telegram APIs.
- Implemented intent classification and scalable webhook architecture.
- Deployed cloud backend for real-time responses.

Customer Churn Prediction System

- Trained models using Logistic Regression, Random Forest, and XGBoost.
- Applied SMOTE balancing and feature engineering.
- Built Power BI dashboards for insights.

Education

B.Tech — Data Science

2023 – 2026

Aditya College of Education, Beed

Diploma — Mechanical Engineering

2019 – 2022

Government Polytechnic Ambad

Achievements

- Deployed multiple ML systems end-to-end.
- Strong GitHub portfolio demonstrating applied ML projects.
- Experience with real-world datasets and production workflows.
